

DIY Morse Code Bracelet Instructions

WHAT YOU'LL NEED:

4 colors of glass beads
(any size, but a little bigger
tends to be easier, at least
2mm-3mm)

Clear stretchy bracelet string
(making sure it's sized right to
fit through the bead hole)

Optional - Small amount of
superglue

That's it!

*(feel free to use any size/type of
beads. Admittedly, the small beads
are tough on the eyes!)*

HOW TO:

Use a Morse Code Translator to get your word or phrase in Morse Code. If you can, it's easiest to have it printed out.

You'll need a base color, spacer color, dot color and line color.

Tie a placement knot in one end and thread on a few base color beads. Next, place one spacer (as the start). Now you'll begin your first word translation.

Use your dot and dash colors for the letters, with one spacer color in between each letter. Once your word is done, use a few base color beads before the next word (keep this uniform, 2 or 3 base beads).

Once you're words or phrase are done, you can add base color beads to make it all even. (I like to use stretchy cord because it's just easy, but you do you!)
Double or even triple knot the cord - make it tight but careful not to break it!

Sometimes I'll put a tiny dot of superglue on the knot and let it fully dry.
